YGC-YGD Series metric Standard Tie Rod Hydraulic Cylinder are designed and manufactured based on the advanced technologies of Parker and Rexroth, with the character of light weight and simple structure, are reliable, easy to assemble and repair. Honda's YGC-YGD Series cylinders are designed to meet the requirements of ISO 6020/2(1991) and DIN24554, 12 standard mounting styles available, widely used in machinery equipment, wood cutting machine, steel processing machine, injection molding machine, die casting machine and ship equipment.

Features

1. Operating Pressure: 7Mpa-21Mpa(1000-3000PSI)
2. Bore Diameter: 40-200mm
3. Piston Rod Diameter: 12-140mm
4. Temperature Range: -20 - +100°C
5. Maximum Speed: 0.5m/s

Extended Tie Rods

Cylinders with TB, TC and TD mountings are suitable for straight line force transfer applications, and are particularly useful where space is limited. For compression (push) applications, cap end tie rod mountings are most appropriate; where the major load places the piston rod in tension (pull applications), head end mounting styles should be specified. Cylinders with tie rods extended at both ends may be attached to the machine member from either end, allowing the free end of the cylinder to support a bracket or switch.

Flange Mounted Cylinders

These cylinders are also suitable for use on straight line force transfer applications. Two flange mounting styles are available, offering either a head flange (JJ) or a cap flange (HH). Selection of the correct flange mounting style depends on whether the major force applied to the load will result in compression (push) or tension (pull) stresses on the piston rod. For compression-type applications, the cap mounting style is most appropriate; where the major load places the piston rod in tension, a head mounting should be specified.

Foot Mounted Cylinders

Style C, foot mounted cylinders do not absorb forces on their centerline. As a result, the application of force by the cylinder produces a moment which attempts to rotate the cylinder about its mounting bolts. It is important, therefore, that the cylinder should be firmly secured to the mounting surface and that the load should be effectively guided to avoid side loads being applied to rod gland and piston bearings. A thrust key modification may be specified to provide positive cylinder location.

Pivot Mountings

Cylinders with pivot mountings, which absorb forces on their centerlines, should be used where the machine member to be moved travels in a curved path. Pivot mountings may be used for tension (pull) or compression (push) applications. Cylinders using a fixed clevis, styles BB and B, may be used if the curved path of the piston rod travel is in a single plane; for applications where the piston rod will travel in a path on either side of the true plane of motion, a spherical bearing mounting SB is recommended.

Trunnion Mounted Cylinders

These cylinders, styles D, DB and DD, are designed to absorb force on their centerlines. They are suitable for tension (pull) or compression (push) applications, and may be used where the machine member to be moved travels in a curved path in a single plane. Trunnion pins are designed for shear loads only and should be subjected to minimum bending stresses.

D,DB,DD

Piston Rod End Remark:

1. Style 9 (female) rod ends should not be used on 160mm or 200mm bore cylinders with a stroke of 50mm or less. Please consult the factory, with details of the application.

2. Non-standard piston rod ends are designated 'Style 3'. A dimensional sketch or description should accompany the order. Please specify dimensions KK or KF, A, rod stand out WF and thread type.

Module Description

YGC-D/dE X 200-TB4111-Y※

C — Type: C=Single Piston Rod; D=Double Piston Rod

D/d — Bore size/Rod size

E — Operating Pressure: C=7Mpa; E=16Mpa; D=21Mpa

200 — Stroke(mm)

TB — Mounting Style: TB=Tie Rods Extended Head End

TD=Tie Rods Extended Both Ends

HH=Cap Rectangular Flange

B=Cap Fixed Eye

SBd=Cap Fixed Eye With Spherical Bearing

DB=Cap Trunnion

TC=Tie Rods Extended Cap End

JJ=Head Rectangular Flange

C=Side Lugs

BB=Cap Fixed Clevis

D=Head Trunnion

DD=Intermediate Fixed Trunnion

4 — Piston Rod Eye Threads Style: 3=Non Standard Piston Rod End; 4=Male Threads;

7=Male Threads

9=Female Threads

1 — Oil Port Threads: 1=BSP(ISO228)standard

2=Metric

3=NPT

1 — Port Position(As follow)

1 — Cushions: 1=Cushion both ends

2=Cushion Cap

3=Cushion Head

4=Non-cushioned

Y — Piston rod extended length, Specify the length in mm

※ — Specify here if any other requirements

Piston Rod Wrench Flats Requirement

0-No wrench flats

1-With two wrench flats

2-With four wrench flats

Port position

Remark:

- The smallest diameter rod end thread for each bore size is designated Style 4 when supplied with a No.1 rod.
 - When the same rod end thread is supplied with a No. 2 or No.3 rod, it is designated Style 7.
 - Style 9 (female) rod ends should not be used on 160mm or 200mm bore cylinders with a stroke of 50mm or less.
- Please consult the factory, with details of the application.

Trunnion Mountings

Style D Head Trunnion

Style DB Cap Trunnion

Note:

On 100-200mm bore cylinders, dimension J becomes J1. ZJ1 replaces ZB, and tie rods are screwed directly into the cap.

Style DD Intermediate Fixed Trunnion

* Head depth increased by 5mm to accommodate port on 25mm and 32mm bore cylinders – see page 111

* Dimensions to be specified by customer

■Accessory Selection

- ☐ Accessories for the rod end of a cylinder are selected by reference to the rod end thread
- ☐ While the same accessories, When used at the cap end, are selected by cylinder bore size.

■Rod Clevis, Eye Bracket, Pivot Pin

Remark:1.The bore size with() are supplied to GB/T2348-1993, but should not be selected priority.

The bore size with ** is not a recommended optional, as this size is not in the list of GB/T2348-1993.

2.When deciding the actual cylinder output, the resistance in the cylinder slipping part and the pressure loss in piping and machines must be considered.

Remark: 1. ψ is the ratio of piston chamber effective area and piston rod chamber effective area.

2. The maximum stroke: S=3D when ψ=1.33; S=10D when ψ=1.46; S=12D when ψ=2.

3. "s1" means the minimum stroke expect for trunnion and intermediate flange mountings.

Piston Rod End Is Male Thread Connecting

1.Fixed Eye(Kep Type)

2.Fixed Eye(Thread)

3.Trunnion

4.Head Flange

5.Intermediate Flange

Remark:

1. If rod diameter need to be enlarged, the rod length will make according to the standard, unless otherwise specified.
2. The rod thread should be M18 × P1.5 when the bore size $\Phi=40\text{mm}$ with the stroke $\geq 500\text{mm}$
3. The rod screw nut outside shape is round when the size in this series over M50mm
4. AST means the adjustable stroke specified by the customers

Remark:

If piston rod diameter required to be enlarged, the related size will scale up.

Features

Working medium	Clean Standard Hydraulic Oil
Cylinder barrel material	QT500-7/45# / SUS304
Operating pressure rang	0.3~14MPa (45-2000PSI)
Temperature Rang	-10~+60(°C)
Speed rang	8-300(mm/s)

Construction Drawing (Double Rod)

SD Axial Direction Mounting
